WE WOOD, YOU PLAY

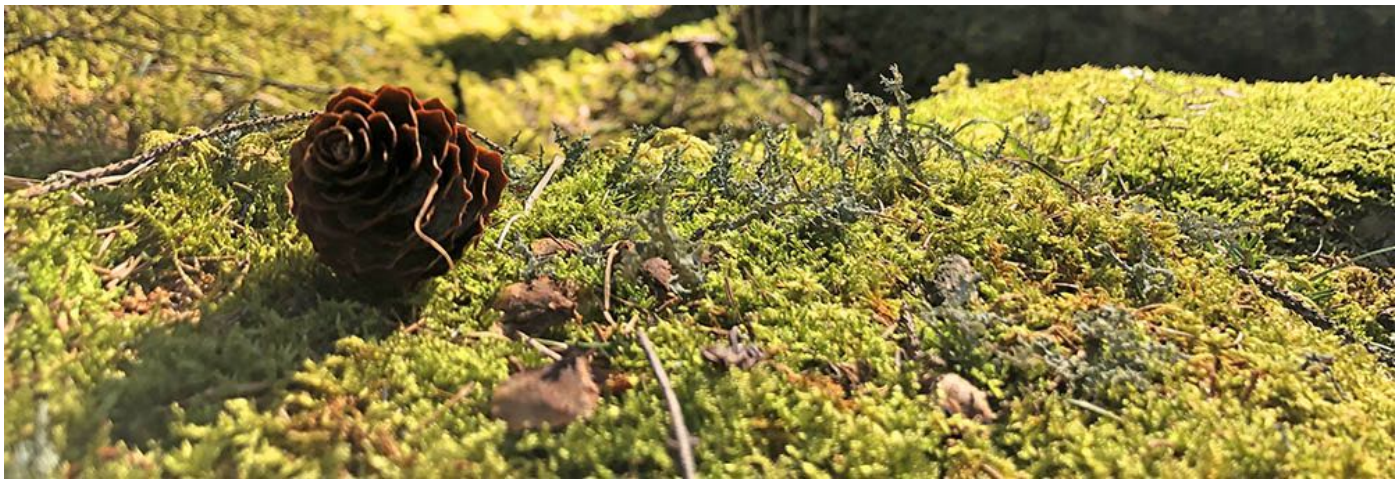
Nature Sensory Path

Forgotten sensations

The sensory path includes multiple activities which have been designed to involve the users in a playful-didactic way by promoting the motor activity safely.

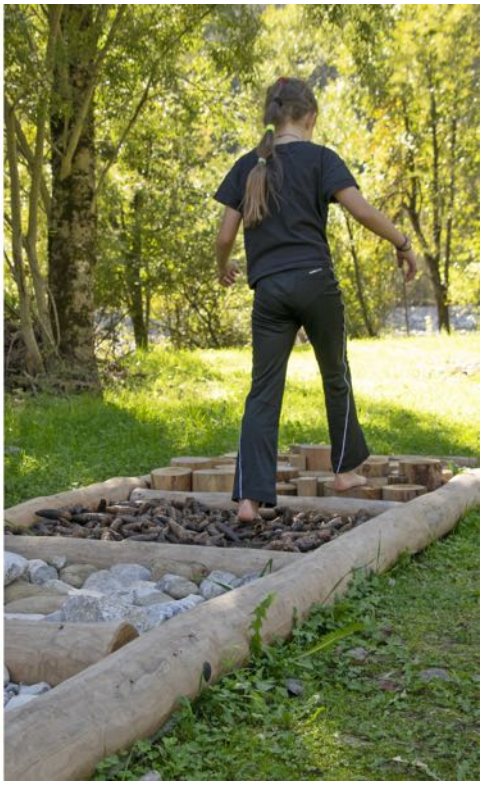


Play, teaching and mobility

The sensory paths include multiple activities designed to involve users in a playful and educational way, encouraging physical activity, in complete safety. The equipment is designed to accompany users of all ages on a fun, attentive and conscious journey, in search of forgotten sensations.

Nature at the heart of the playground

Contact with nature is constant also thanks to the material with which the path is built: WOOD, the most renewable and natural raw material in the world, obtained at "Km. zero" from FSC® certified forests and processed using energy coming exclusively from renewable sources.



Sustainable, recycled, recyclable:

The equipment is sized to withstand the external environment for a long time thanks to the special treatment of the wooden parts according to the EN-351 standards. Upon request, natural Robinia wood is also used, which is the most resistant to rot. All the materials used are reusable and recyclable or biodegradable at the end of their life cycle. The production of the sensory paths takes place using exclusively energy obtained from renewable sources (sun, water, biomass) and raw materials obtained at zero kilometers in compliance with the Minimum Environmental Criteria. The installation of the sensory paths minimizes the use of beton.

WE WOOD, YOU PLAY

Nature and inclusiveness:

In line with the Play For All Project, the routes are inclusive and include versions that can be used by all users, regardless of age or ability. In designing the routes, particular attention is paid to accessibility and the inclusion of equipment that facilitates the educational and playful use of the senses: sight, touch, hearing and smell. With reference to local traditions and culinary excellence, it is also possible to include references to taste.

Experiential path:

Along the sensory paths it is possible to learn to recognize trees and the magic of photosynthesis, use a natural wooden xylophone, go through a path walking barefoot to rediscover forgotten sensations, recognize natural essences through smell, discover and imitate in different forms the ability of animals, discover how sound propagates and much more. Everything is illustrated in special educational panels with instructions on the activities to be carried out. All the activities are customizable on the theme of the park or the place.

Educational gardens and sensoriality:

The botanical garden is a living museum that proposes the conservation of flora, dissemination and environmental education. In controlled areas such as schools, oratories, youth centers, it represents a valid complement to sensory paths.
Sight, taste and smell are exalted in the kingdom of plants by knowing their characteristics, harvesting period, uses and curiosities.

Come in and discover the sensory paths inspired by nature

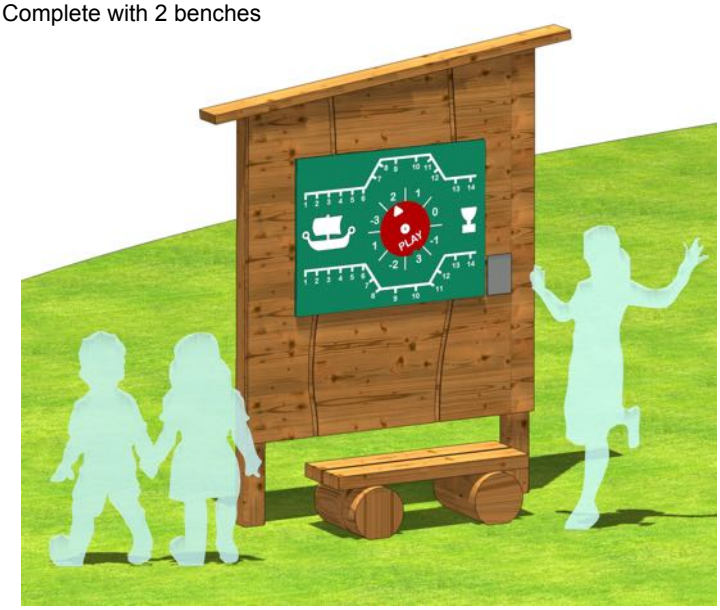
Interaction walls

Routes with multiple spaced stations

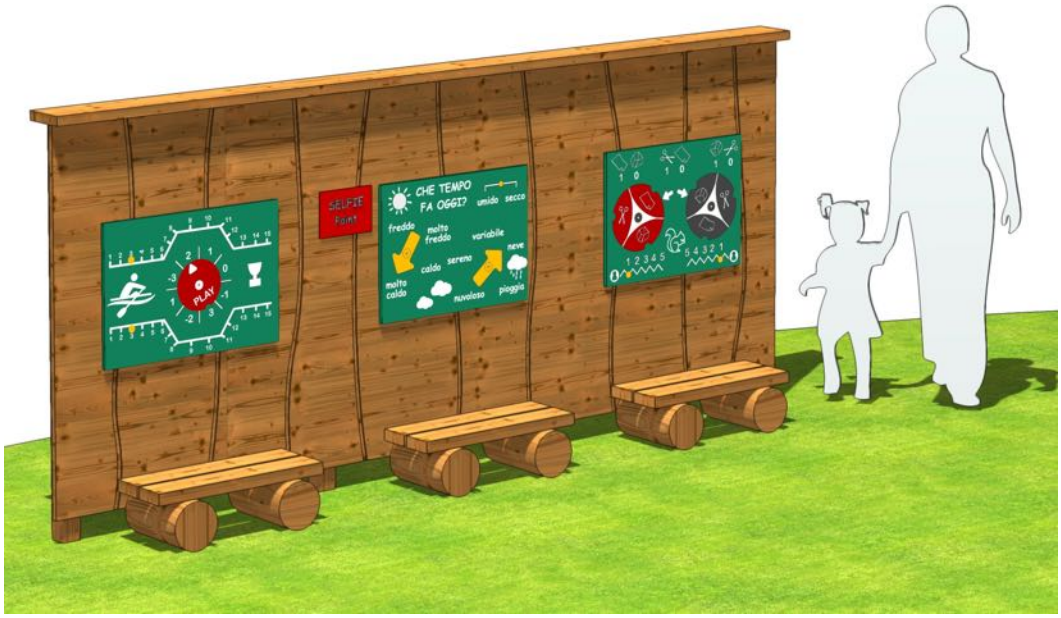
Art. 011072
Parete di interazione
130x100 H 175 cm

Wall with 2 activities (front and back)
Complete with 2 benches



Interaction walls

Modular multiple installation
Can include three or more interaction walls



Sociality and safety

The interaction walls, in addition to the playful and educational aspects, promoteinclusive socialization between users of different ages and different abilities. Challenges, games and imagination help young and old to integrate and cooperate in complete safety. For Legnolandia, interactive outdoor play means fun, manual skills, fantasy with natural elements without electronics and without artificial lights and sounds.

All equipment is designed and built in compliance with the UNI-EN 1176 safety standards in force under the strict supervision of the TÜV SÜD
